Customer Data

Company: Wiener Linien GmbH & Co KG
 Contact person: Herr Helmut Winhofer
 No of employees: > 1000, No of freelancers: keine Angabe
 Annual Revenue: über 600.000 Euro
 Description:

With about 120 lines and annually more than 839 million passengers, Wiener Linien is the leading provider of public transport in Vienna. A high level of proficiency, best service, reasonable fares and the commitment to social and environmental responsibility are part of the formula for success.

Wiener Linien reduces the traffic on the streets. To ensure this in future, Wiener Linien constantly sets new impulses – for an increase in attractiveness of public transport and the city of Vienna.

Short Description

Imagine: It's 6 pm and you have just finished work. How do you find out the best way to get to a concert on the other side of town? The mobile information service "qando" can tell you the quickest way in just a few seconds. You start the application and choose "journey planner" from the main menu. Using the GPS determined starting location you enter the address of your destination and request the route. You will be offered a number of routing options from which you can choose the one most convenient for you. A direct link to the real-time departure information board will give you information at a glance, and tell you precisely how much time you need to change trains or buses. Another simple touch on the device will allow you to buy a ticket for that trip without having to queue at the ticket counter. After the concert you can start the application again and select the route from the event location to your home. "qando" will not only provide you with the best route information for your way home, but will also give you information on places along the route, where you can get something to eat, before you go home. "qando" integrates different information sources and creates a unique user experience focused on the travellers' needs. "qando" is a service of Wiener Linien and the Verkehrsverbund Ost-Region (VOR) developed by the design and software company Fluidtime.
